VT102

Powering Insights Through a Dedicated AI-enabled Device

From light and heavy-duty vehicles, the VT102 paired with TN360 offers the benefit of an AI-powered fleet management solution to help you derive metrics key to your business success direct from the data produced by your vehicles and drivers. Designed with the transport and logistics industry in mind, the VT102 collects key metrics such as trip distance, vehicle engine data, and safety data and sends it to TN360, where you can easily view current status, alerts and ask detailed questions through Insights or run customised reporting. The VT102 is TCA type-approved for use in regulatory applications in Australia for improved access to the road network or increased payload.

Turning Data into Decisions

VT102 captures key data from your drivers and vehicles, including harsh driving events, vehicle performance and maintenance, and delivers it to the TN360 software platform that transforms this into insights for your business.
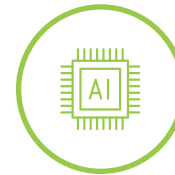

- Get second-by-second high-definition tracking for real-time vehicle status updates

- Capture safety events such as harsh acceleration, braking and cornering, via the gyroscope and accelerometer

- Driver gains a wide range of applications to make their job easier via an in-cab device

- Allows for general purpose input / output (GPIO)

Powering Insights

Together with the AI-powered TN360 platform, the VT102 enables you to access business insights through easy to use analytics tools.

- Analytics powered by artificial intelligence aimed at providing you with real-time information

- Question-based search which "learns" about your business and instantly answers your questions

- Visualised analytics into key performance areas including productivity and safety

- Customisable reporting for trip details, driver events, vehicle performance, maintenance, and alerts

Delivers Integrated Applications

The data captured via the VT102 also powers the TN360 driver application that keeps you connected with your workforce throughout the day. Your driver and vehicle data is all available in real-time.

- VT102 provides level 1,2 & 3 assurance for use in RIM, TMA or IAP access programs

- Stay connected with your workforce through a flexible suite of applications delivered directly to drivers to complete their tasks with ease

- Ability to integrate with third party solutions to empower improved business systems
