

BRING YOUR OWN DEVICE (BYOD)

Simplify your operation on your devices with our applications

Today's requirements in business applications are extensive, and one size may not fit all in today's modern world. Each business is as unique as your fingerprint. Flexibility is key when it comes to technology and telematics. Being able to bring in your own in-cab device into the fold is fast becoming important with the range of applications you may need to use.

Available on both Android and Apple iOS, you can build your digital future with TN360 apps that connect your team and empower users, both in the office and in the field, to make fast, more informed, and realistic decisions with confidence. With real-time data delivered directly to your devices, they can integrate directly to TN360's architecture for instant access to critical workflow information.

Digital Workflow

Integrate smart apps into your world with ease to reduce the amount of manual process through a digital workflow

Cost Reduction

Information at your fingertips to help make more informed decisions to save your business money

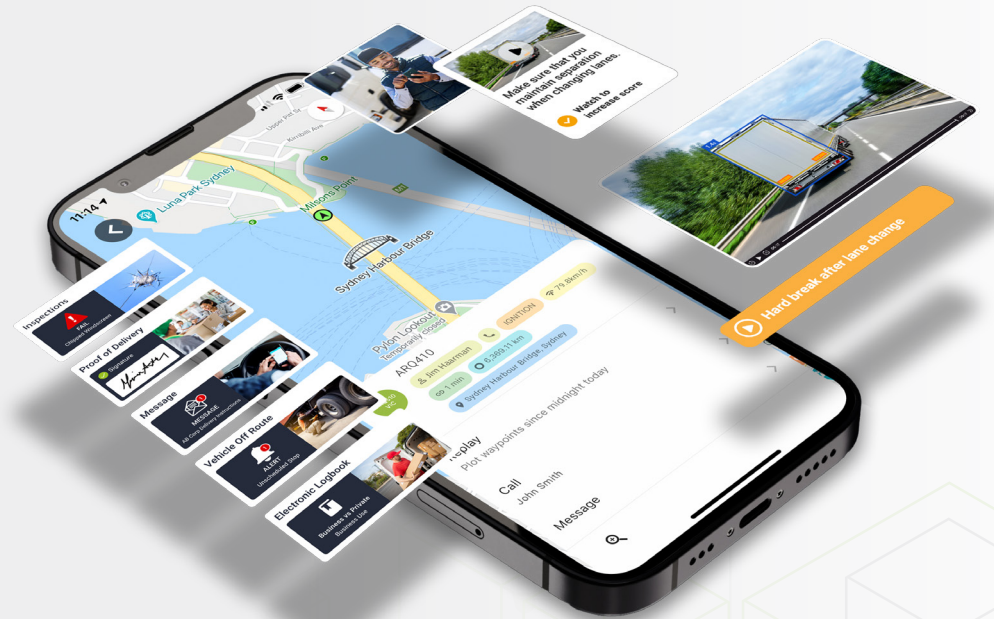

Transform your Business

Technology and its data to reduce costs, improve productivity & increase performance

Multiple Applications

Applications available across a range of devices to suit your business requirements

Powered by TN360, an AI-enabled fleet management solution, the list of applications available means you have a choice of what you need to run to optimise your business.
