

**SOLAR ASSET TRACKER**

Reliably Track  
Powered & Non-  
Powered Assets

The Teletrac Navman Solar Asset Tracker is a purpose designed and cost effective solution for tracking of small assets and trailers. It uses the latest in efficient, low power IoT communications to provide years of reliable, battery powered location tracking for essentially any kind of asset. The Solar Asset Tracker is especially suited to set-and-forget tracking of trailers and portable equipment due to

its rugged, waterproof design and solar charging long-life battery.

With Teletrac Navman and the Solar Asset Tracker, you can see all of your vehicles, machinery, trailers and essential assets together in one system. You can track location, see who is using what, know when assets move - on or off site, and track utilisation and maintenance.

**FEATURES AND BENEFITS**

**Asset Tracking** — Accurate GPS location of any asset, powered or unpowered. Excellent 4G network coverage for real-time position updates. See it all in one system.

**Self-Sustaining Battery Power** — 5-7 year battery life depending on update rate and extended with built-in solar charging capability.

**Easy to Manage** — Simple self-installation. Report on equipment location, activity and utilisation.

**Cost Effective** — Dual 4G LTE-Cat-M1 and NB-IoT network communications make the hardware both futureproof and highly cost efficient using the latest in IoT technology. These networks feature excellent power conservation and area coverage coupled with optimised data bandwidth and speed, providing the best balance of cost and performance.

**Reliable and Built to Last** — Rugged and waterproof IP67 rated housing. Discrete, highly durable, slim-line design.
